EDGEPROBE ADVANCED DVB-S/S2

RF, ASI, IP Monitoring

THE IDEAL TOOL FOR ACCURATE & COST-EFFECTIVE MONITORING OF THE QUALITY OF DTV DISTRIBUTION OVER SATELLITE LINKS.

Combined with a Network Monitoring System or not, the EdgeProbe Advanced provides a powerful network alert & diagnosis tool allowing DTV network operators to monitor global trends and anticipate potential failures. EdgeProbe Advanced provides monitoring of the signal at different levels:

- RF satellite distribution: measures key RF signal parameters (Level, CNR, Eb/N0, link margin, BER) and indicates the modulation parameters
- MPEG-2 TS: checks the ETSI TR 101 290 (Priority 1, 2 & 3) conformance and provides optional Quality of Service indicators (Service Availability, Service Degradation)
- T2-MI: checks the distribution link at L1 pre & post signaling level
- OneBeam/SingleIllumination: checks the T2-MI marker and In-Band specific PIDs

APPLICATIONS

- 24/7 Monitoring and Maintenance of both Uplink and Downlink sites (RF & Baseband)
- Generation of Service Availability reports for Service Level Agreements
- Gateway from RF to ASI or IP
- Live transmission recorder

BENEFITS

- Standalone, easy to use and configure, fast deployment, SNMP compatible
- Increase customer satisfaction by detecting & preventing DTV network degradations before your customers do
- Reduce site maintenance cost by anticipating and identifying issues
- Detect Satellite Distribution issues before it affects the whole network
- Plan and improve the network configuration by identifying global trends
- Remotely accessible, compatible with low bandwidth control networks (GPRS/3G/4G)
- Low power consumption 25W
